EDUCATION

Bachelor's in Computational Data Science - 2021

State College, PA

The Pennsylvania State University

Masters in Artificial Intelligence - 2025

The Pennsylvania State University

- Relevant Experience: Data Science, Programming; Software Engineering; Machine Learning; AI

WORK EXPERIENCE

Lockheed Martin

Fort Worth, TX (Remote)

Data Analyst

January 2022-Current

- Currently working under the F-35 program as a data scientist. Running model simulations, dealing with data transformations, analysis, estimations, and visualization. Working with Python, SQL, SAS, MATLAB, VBA, C#, and Tableau. Our start to finish process involves ingesting data from other teams through SAP HANA, transforming it with Python and/or SAS. Running time series models, and analyzing metrics with Python. Additionally we built C#, MATLAB and SQL based tools and scripts to further aggregate data that comes from additional teams. Finally we aggregate all our data into a MSAccess database and run our simulation scenarios on a discrete-event simulator.

Savantis Group

Spring Dale, Exton PA

Software Engineer Intern

Summer 2018 & Summer 2019

- Intern with a company that offered SAP consultancy services. Worked with a team on a project for a movie theater from California called ArcLight Cinemas. Worked on creating GUIs and simulation processes of the POS, Kiosk, and other GUIs. Got to work close with the project manager on the feature designs and workflows for all GUIs, all implemented with Java Swing and FX. Additionally, Got to help with data cleaning, analysis using Numpy and Pandas, ticket costs estimations with Sklearn, and PyTorch, and visualization using Matplotlib.

TECHNICAL SKILLS

Programming Languages: Python, R, Matlab, C++, Java. **Query Language:** MySQL, SAS, MS Access.

Web Applications: Django Framework, JavaScript, React, CSS, HTML. **Web Scrapping:** Selenium

Cloud Experience: E2C, SageMaker. **ML:** PyTorch, Tensorflow, Sklearn. **Computer Vision:** OpenCV

Data Orchestrator: Apache Airflow **Big Data:** PySpark.

Additional Skills: Quick Learner. Good communicator, problem solver, passionate about data science and computer science. Always trying to learn new things.

UNIVERSITY PROJECTS

Penn State Hershey's Medical Center Capstone

Fall 2020

- Along side 5 other classmates we worked on developing a system that would estimate the individual cost that certain surgeries The goals included cost analysis, cost estimate based on data collected for a given surgery, and data visualization. Particularly worked on data cleaning, analysis and machine learning models, mainly using the R Language based on the sponsor choice of preference.

Penn State Nittany Data Labs

Spring 2020 - Fall 2021

- Formed part of the Nittany Data Labs where we learned and applied Data Science on problems and workshops using Spark and PySpark

PERSONAL PROJECTS AND STUDY

- Outside of working hours I'm working on building a web application using Django and React that uses machine learning to estimate desired values, and displays visualization of the data that a user uploads from their created account, all to deployed with AWS.

Additional I enjoy working on model-free models for on and off policy, for deep reinforcement learning. I also keep my self busy reading and working on projects on Data Science, Deep Reinforcement Learning, Computer Vision, and MLOps.
