EDUCATION

Bachelor's in Computational Data Science - 2021

The Pennsylvania State University

State College, PA

Masters in Artificial Intelligence - 2025

The Pennsylvania State University

- Relevant Experience: Data Science, Programming; Software Engineering; Machine Learning; AI

WORK EXPERIENCE

Lockheed Martin

Data Analyst

Fort Worth, TX (Remote)

January 2022-Current

- Currently working under the F-35 program as a data scientist. Running model simulations, dealing with data wrangling, exploration, analysis, predictions, and visualization. Worked with C#, Python, MATLAB, SAS, VBA, SQL, and Tableau. Our start to finish process involves ingesting data from other teams, analyzing and modify to run our simulations. For our simulation scenarios we use create tabular data and feed it to our discrete-event simulator. Our simulation tools are built run on our C# and Python.

Savantis Group

Intern

Spring Dale, Exton PA

Summer 2018 & Summer 2019

- Intern with a company that offered SAP consultancy services. Worked with a team on a project for a movie theater from California called ArcLight Cinemas. I worked on creating GUIs and simulation processes of the POS, Kiosk, and other GUIs. I got to work close with the project manager on the feature designs and workflows for all GUIs. The work was done with Java Swing and FX. Additionally, I was offered to help with data cleaning, analysis using Numpy and Pandas, ticket costs estimations with Sklearn, and PyTorch, and visualization using Matplotlib.

TECHNICAL SKILLS

Programming Languages: Python, R, Matlab, C++, Java. **Query Language:** SAS, MySQL, MS Access.

Web Applications: Django Framework, CSS, HTML, React, JavaScript. **Web Scrapping:** Selenium

Additional Skills: OpenCV, PySpark, Tableau, PyTorch, Tensorflow, Sklearn, SarPy, Apache Airflow .

Good communicator, problem solver, passionate about data science and computer science.

Always trying to learn new things, and especially with image processing and algorithms.

UNIVERSITY PROJECTS

Penn State Hershey's Medical Center Capstone

Fall 2020

- Along side 5 other classmates we worked on developing a system that would estimate the individual cost that certain surgeries The goals included cost analysis, data visualization, cost estimate based on given variables for a given surgery. Particularly worked on data cleaning, analysis and statistical learning models, mainly using the R Language based on the sponsor choice of preference.

Penn State Nittany Data Labs

Spring 2020 - Fall 2021

- Formed part of the Nittany Data Labs where we learned how to apply Data Science on problems and Workshops on data analysis and big data with Spark and PySpark

EXTRACURRICULAR ACTIVITIES

Penn State Robotics Club

Brandywine, PA

- Was part of the Penn State Robotics Club at the Brandywine campus working with **Spring 2019**
- Lego Mindstorms Tool Kits. Such as making a car to parallel park and drive on a labyrinth.

PERSONAL PROJECTS AND STUDY

- Outside of working hours I work on building web application using Django and React that performs analysis, predictions, and visualization on the data that a user would upload. As well as model-free models For on and off policy, for deep reinforcement learning.

I keep my self busy reading and working on projects on Data Science, Deep Reinforcement Learning, Computer Vision, and MLOps.
