EDUCATION

Bachelor's in Computational Data Science - 2021

The Pennsylvania State University

State College, PA

Masters in Artificial Intelligence - 2025

The Pennsylvania State University

- Relevant Experience: Data Science, Programming; Software Engineering; Machine Learning; AI

WORK EXPERIENCE

Lockheed Martin

Fort Worth, TX (Remote)

• **Data Scientist**

January 2022-Current

- Currently working under the F-35 program as a data scientist resolving questions unique case scenarios. By running model simulations, doing data analysis, transformations, estimations and visualizations.

- Improved existing MySQL programs into SAS programs, reducing existing ETL step from 1-2 days to 2 hours. As well as improved debugging and easier CI/CD to the new SAS programs.

- Worked on creating ScikitLearn based machine learning pipelines for some of our maintenance and flight hours metrics, while using different regression models and dealing with data and model drift.

- Worked on Jupyter notebook creating notebooks for SAP HANA data ingestion, preprocessing and creating baseline time series models like ARIMA, Prophet, Seasonal Naive, Exponential Smoothing models.

- Added new features and updated existing programs in Python, SQL, SAS, MATLAB, VBA, C#, and Tableau.

Savantis Group

Spring Dale, Exton PA

• **Software Engineer Intern**

Summer 2018 & Summer 2019

- Intern with a consultancy company that used SAP services and worked with a team on a project for a movie theater from California called ArcLight Cinemas.

- Worked on creating GUIs and simulation processes of the POS, and Kiosk using Java Swing and FX. And got to work close with the project manager on the feature designs and workflows for all GUIs.

- Additionally, got to help with cleaning and analyzing data using Numpy and Pandas, as well as creating ticket costs estimations with Sklearn, and PyTorch, and visualization using Matplotlib.

TECHNICAL SKILLS

Programming Languages: Python, R, Matlab, C++, Java. **Query Language:** MySQL, SAS, MS Access.

Web Applications: Django Framework, JavaScript, React, CSS, HTML. **Web Scrapping:** Selenium

Cloud Experience: E2C, SageMaker. **ML:** PyTorch, Tensorflow, Sklearn. **Computer Vision:** OpenCV

Data Orchestrator: Apache Airflow **Big Data:** PySpark.

Additional Skills: Quick Learner. Good communicator, problem solver, passionate about data science and computer science. Always trying to learn new things.

UNIVERSITY PROJECTS

Penn State Hershey's Medical Center Capstone

Fall 2020

- Along side 5 other classmates we worked on developing a system that would estimate the individual cost that certain surgeries. The goals included cost analysis, cost estimate based on data collected for a given surgery, and data visualization. Particularly worked on data cleaning, analysis and machine learning models, mainly using the R Language based on the sponsor choice of preference.

PERSONAL PROJECTS AND STUDY

- Outside of working hours I'm working on building a web application using Django and React. Where a user uploads data from their created account, and creates machine learning models on their data to estimate new values both on-server and on-browser, and displays visualizations of the data, all to be deployed with AWS.

Additional I enjoy working on model-free models for on and off policy, for deep reinforcement learning. I also keep my self busy reading and working on projects on Data Science, Deep Reinforcement Learning, Computer Vision, and MLOps.
